Relevance scale

1 Statistical and learning methods I: A report of recent progress in transformation-based error-driven learning
Eric Brill
March 1994 **Proceedings of the workshop on Human Language Technology HLT '94**
Publisher: Association for Computational Linguistics
Full text available: pdf(534.46 KB) Additional Information: full citation, abstract, references

Most recent research in trainable part of speech taggers has explored stochastic tagging. While these taggers obtain high accuracy, linguistic information is captured indirectly, typically in tens of thousands of lexical and contextual probabilities. In [Brill 92], a trainable rule-based tagger was described that obtained performance comparable to that of stochastic taggers, but captured relevant linguistic information in a small number of simple non-stochastic rules. In this paper, we describe ...

2 Transformation-based error-driven learning and natural language processing: a case study in part-of-speech tagging
Eric Brill
December 1995 **Computational Linguistics**, Volume 21 Issue 4
Publisher: MIT Press
Full text available: pdf(1.43 MB) Additional Information: full citation, abstract, references, citings
Publisher Site

Recently, there has been a rebirth of empiricism in the field of natural language processing. Manual encoding of linguistic information is being challenged by automated corpus-based learning as a method of providing a natural language processing system with linguistic knowledge. Although corpus-based approaches have been successful in many different areas of natural language processing, it is often the case that these methods capture the linguistic information they are modelling indirectly in la ...

3 Beyond schema evolution to database reorganization
Barbara Staudt Lerner, A. Nico Habermann
September 1990 **ACM SIGPLAN Notices , Proceedings of the European conference on object-oriented programming on Object-oriented programming systems, languages, and applications OOPSLA/ECOOP '90**, Volume 25 Issue 10
Publisher: ACM Press
Full text available: pdf(979.63 KB) Additional Information: full citation, abstract, references, citings, index

terms

While the contents of databases can be easily changed, their organization is typically extremely rigid. Some databases relax the rigidity of database organization somewhat by supporting simple changes to individual schemas. As described in this paper, OTGen supports not only more complex schema changes, but also database reorganization. A database administrator uses a declarative notation to describe mappings between objects created with old versions of schemas and their corresponding repre ...

4 XML query forms (XQForms): declarative specification of XML query interfaces

Michalis Petropoulos, Vasilis Vassalos, Yannis Papakonstantinou

April 2001 **Proceedings of the 10th international conference on World Wide Web**

5 System descriptions: New York University: description of the PROTEUS system as used for MUC-3

Ralph Grishman, John Sterling, Catherine Macleod

May 1991 **Proceedings of the 3rd conference on Message understanding MUC3 '91**

Publisher: Association for Computational Linguistics

Full text available: pdf(442.98 KB) Additional Information: full citation, abstract, references

The PROTEUS system which we have used for MUC-3 has three main components: a syntactic analyzer, a semantic analyzer, and a template generator.

6 A law-based approach to object-oriented programming

Naftaly H. Minsky, David Rozenshtein

December 1987 **ACM SIGPLAN Notices , Conference proceedings on Object-oriented programming systems, languages and applications OOPSLA '87**, Volume 22 Issue 12

Publisher: ACM Press

Full text available: pdf(1.07 MB) Additional Information: full citation, abstract, references, citings, index terms

The central idea behind this paper is that the discipline governing the exchange of messages between objects should be specifiable by the programmer in the form of an explicit law of the system. We show how, starting from a very primitive foundation, which presumes neither encapsulation nor inheritance, one can establish various forms of both, as well as other useful disciplines, simply by means of appropriate laws.

7 PYTHIA-II: a knowledge/database system for managing performance data and recommending scientific software

Elias N. Houstis, Ann C. Catlin, John R. Rice, Vassilios S. Verykios, Naren Ramakrishnan, Catherine E. Houstis

June 2000 **ACM Transactions on Mathematical Software (TOMS)**, Volume 26 Issue 2

Publisher: ACM Press

Full text available: pdf(796.18 KB) Additional Information: full citation, abstract, references, citings, index terms

Often scientists need to locate appropriate software for their problems and then select from among many alternatives. We have previously proposed an approach for dealing with this task by processing performance data of the targeted software. This approach has

been tested using a customized implementation referred to as PYTHIA. This experience made us realize the complexity of the algorithmic discovery of knowledge from performance data and of the management of these data together with the d ...

8 A tool framework for static and dynamic analysis of object-oriented software with templates

Kathleen A. Lindlan, Janice Cuny, Allen D. Malony, Sameer Shende, Forschungszentrum Juelich, Reid Rivenburgh, Craig Rasmussen, Bernd Mohr

November 2000 **Proceedings of the 2000 ACM/IEEE conference on Supercomputing (CDROM)**

Publisher: IEEE Computer Society

Full text available: pdf(2.67 MB) Publisher Site Additional Information: full citation, abstract, references, citings, index terms

The developers of high-performance scientific applications often work in complex computing environments that place heavy demands on program analysis tools. The developers need tools that interoperate, are portable across machine architectures, and provide source-level feedback. In this paper, we describe a tool framework, the Program Database Toolkit (PDT), that supports the development of program analysis tools meeting these requirements. PDT uses compile-time information to create a comp ...

9 Synthesis of custom processors based on extensible platforms

Fei Sun, Srivaths Ravi, Anand Raghunathan, Niraj K. Jha

November 2002 **Proceedings of the 2002 IEEE/ACM international conference on Computer-aided design**

Publisher: ACM Press

Full text available: pdf(328.04 KB) Additional Information: full citation, abstract, references, citings, index terms

Efficiency and flexibility are critical, but often conflicting, design goals in embedded system design. The recent emergence of extensible processors promises a favorable tradeoff between efficiency and flexibility, while keeping design turnaround times short. Current extensible processor design flows automate several tedious tasks, but typically require designers to manually select the parts of the program that are to be implemented as custom instructions.In this work, we describe an automatic ...

10 A video retrieval and sequencing system

Tat-Seng Chua, Li-Qun Ruan

October 1995 **ACM Transactions on Information Systems (TOIS)**, Volume 13 Issue 4

Publisher: ACM Press

Full text available: pdf(3.20 MB) Additional Information: full citation, abstract, references, citings, index terms, review

Video is an effective medium for capturing the events in the real world around us, and a vast amount of video materials exists, covering a wide range of applications. However, widespread use of video in computer applications is often impeded by the lack of effective tools to manage video information systematically. This article discusses the design and implementation of a frame-based video retrieval and sequencing system (VRSS). The system is designed to support the entire process of video ...

Keywords: cinematic rules, frame-based modeling, multimedia, video retrieval, virtual editing
